I am a passionate and motivated junior front- end developer with a strong foundation in web development technologies. Currently in my fourth year of BSUIR, pursuing a Bachelor 's degree in Computer Science, I am eager to apply my skills and knowledge to real-world projects. Familiar with front- end libraries like React and Redux, have experience working with REST API and Node.js. Currently, my goal is to acquire new knowledge and experience, start a career as a junior front end developer, enhance my skills, and professionally grow in the IT field.

EDUCATION

BSUIR
Faculty of Computer Systems and Networks, Specialization in Software Information Technology
09/2020 - Present

EDUCATIONAL PROJECTS

Course project "Social network" (02/2023 - 05/2023)
- The core functionality of the social network has been implemented: profile creation and editing, post publishing, a system for following other users, and a chat (based on WebSocket). The project was developed using React, Redux, Node.js, and SQLite was used for data storage.
- https://github.com/DaniilNekrasov/React

Web app ''Excel comparitive'' (08/2023)
- An application that implements the search for identical cells in specific columns of Microsoft Excel documents.

Next.js app "Store" (07/2023)
- Online store built with Next.js using a fake REST API of JSON data.

Generation and distribution of pseudo-random numbers (09/2023)
- Building a generator for a sequence of uniformly distributed random numbers based on the Lemer algorithm. For the given sample of numbers, a histogram has been constructed, and estimates for the mean, variance, and standard deviation have been calculated.
